

Genetic Technology Instrumentation

GTI-Haemoglobin Electrophoresis Apparatus

Electrophoresis is a commonly used technique for the separation of haemoglobin fractions. GTI-Haemoglobin Electrophoresis Apparatus is specifically designed to provide high quality results at minimal cost. The complete package includes a sample applicator, electrophoresis tank, and a mini power supply. It can provide useful diagnostic information about most types of thalassaemias and abnormal haemoglobins.

Salient Features:

- A robust sample applicator to apply six samples at a time.
- Electrophoresis tank designed to hold 57x37 mm Cellulose Acetate Strips.
- Takes just 20 ml of buffer
- Built in illumination to indicate electrophoresis run.
- Turn around time 15-20 minutes
- Mini power supply with a built in timer.
